Scientists' theory, imagination and assumption about stars

1. *Sun is a star 150 million km from earth.*
2. *Proxima Centauri (nearest star from earth) Distance from Earth 4.246 light years. 1 light year= 9.461×10^{15} metre*
3. *100 billion stars being born and dying each year.*
4. *Milky way (our galaxy) 100 billion to 400 billion stars.*
5. *Andromeda galaxy: 1 trillion stars.*
6. *Triangulam galaxy: 40 billion stars.*
7. *Large Magellanic galaxy: 30 billion stars.*
8. *1c 1101 galaxy: 100 trillion stars.*
9. *Whirlpool galaxy: 100 billion stars.*
10. *Number of galaxies: 2 trillion.*
11. *What is star: A fixed luminous point in night sky which is a large, remote, incandescent body like the sun.*
12. *Dwarf star size is similar to Earth's size. Supergiant star size is more than 1500 times larger than Our Sun. The radius of sun is 696,340 km.*

Dear Brothers and Sisters, it is He (Allah) who makes (one) laugh and weep, and it is He who causes death and gives life, And that He creates the two mates the male and female, From a sperm-drop when it is emitted, And that (incumbent) upon Him is the next creation, And that it is He who enriches and suffices, And is He who is the Lord of Sirius.

Allah is Omnipotent. We must not associate anyone with Allah. We should follow Quran and Sunnah to get success in this world and in the life hereafter.

We seek Allah's blessings.

Ameen
